Baker – <a href="https://www.storageperformance.org">AuditService@StoragePerformance.org</a> 643 Bair Island Road, Suite 103 Redwood City, CA 94063 Phone: (650) 556-9384 FAX: (650) 556-9385 |  |  |  |  |

#### **Revision Information and Key Dates**

| Revision Information and Key Dates  |                     |  |  |  |
|---|---------------------|--|--|--|
| SPC-1 Specification revision number   | V1.12               |  |  |  |
| SPC-1 Workload Generator revision number  | V2.1.0              |  |  |  |
| Date Results were first used publicly   | February 1, 2010    |  |  |  |
| Date the FDR was submitted to the SPC   | February 1, 2010    |  |  |  |
| Date the revised FDR was submitted to the SPC  Tested Storage Product (TSP) name revision for clarification "IBM System Storage DS8700 (4 node with SVC 5.1 cluster)" was revised to: "IBM System Storage SAN Volume Controller v5.1 (6-node cluster with 2 IBM DS8700s)" | March 9, 2010       |  |  |  |
| Date the priced storage configuration is available for shipment to customers  | currently available |  |  |  |
| Date the TSC completed audit certification  | January 29, 2010    |  |  |  |

EXECUTIVE SUMMARY Page 3 of 8

#### **Tested Storage Product (TSP) Description**

The IBM System Storage SAN Volume Controller (SVC) enables a single point of control for disparate, heterogeneous storage resources to help support improved business application availability and greater resource utilization. SAN Volume Controller is designed to pool storage volumes from IBM and non-IBM storage systems into a single reservoir of capacity for centralized management. SVC Version 5.1, implemented using CF8 nodes as in the present test result, offers 8 Gbps port speeds, 24 GB of cache per node, optional capability (not used in the present test) to incorporate SSD drives, and significantly faster processor technology compared with SVC Version 4.3.

The IBM System Storage DS8000™ series encompasses the flagship disk enterprise storage products in the IBM System Storage portfolio. The DS8700 represents the latest in this series of enterprise disk storage systems designed for high-performance, high-capacity and resiliency. Major new capabilities include IBM POWER6 Processing technology and PCI-e I/O enclosures.

#### **Summary of Results**

| SPC-1 Results  |                     |  |  |
|--|---------------------|--|--|
| Tested Storage Product (TSP) Name: IBM System Storage SAN Volume Controller v5.1 (6-node cluster with 2 IBM DS8700s) |                     |  |  |
| Metric Reported Result   |                     |  |  |
| SPC-1 IOPS™  | 380,489.30          |  |  |
| SPC-1 Price-Performance  | \$18.83/SPC-1 IOPS™ |  |  |
| Total ASU Capacity 97,581.657 GB   |                     |  |  |
| Data Protection Level Protected (Mirroring)  |                     |  |  |
| Total TSC Price (including three-year maintenance)   | \$7,165,323.19      |  |  |

**SPC-1 IOPS™** represents the maximum I/O Request Throughput at the 100% load point.

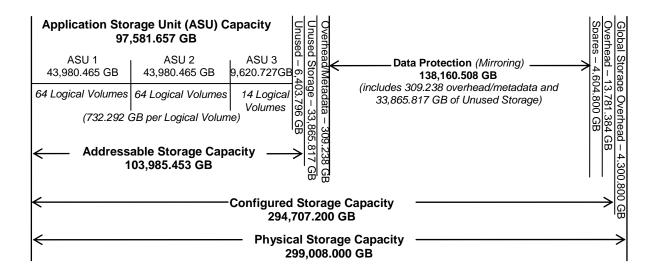

**Total ASU** (Application Storage Unit) **Capacity** represents the total storage capacity read and written in the course of executing the SPC-1 benchmark.

A **Data Protection Level** of **Protected** using *Mirroring* configures two or more identical copies of user data.

EXECUTIVE SUMMARY Page 4 of 8

#### **Storage Capacities and Relationships**

The following diagram and table document the various storage capacities, used in this benchmark, and their relationships, as well as the storage utilization values required to be reported.

| SPC-1 Storage Capacity Utilization |        |  |  |  |
|------------------------------------|--------|--|--|--|
| Application Utilization            | 32.64% |  |  |  |
| Protected Application Utilization  | 67.52% |  |  |  |
| Unused Storage Ratio               | 24.79% |  |  |  |

**Application Utilization:** Total ASU Capacity (97,581.657 GB) divided by Physical Storage Capacity (299,008.000 GB)

**Protected Application Utilization:** (Total ASU Capacity (97,581.657 GB) plus total Data Protection Capacity (138,160.508 GB) minus unused Data Protection Capacity (33,865.817 GB) divided by Physical Storage Capacity (299,008.000 GB)

**Unused Storage Ratio:** Total Unused Capacity (74,135.43 GB) divided by Physical Storage Capacity (299,008.000 GB) and may not exceed 45%.

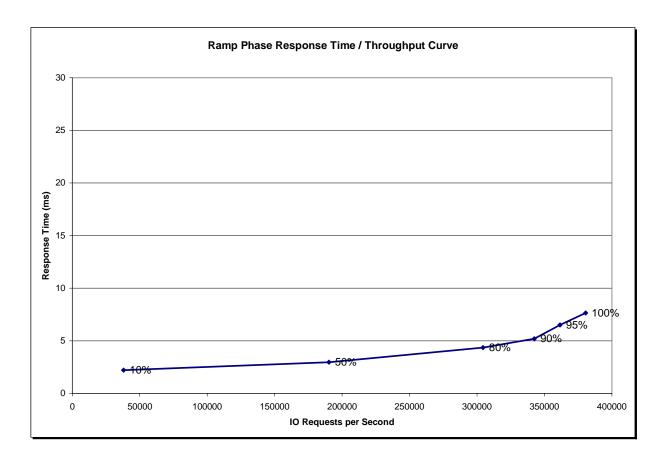

Detailed information for the various storage capacities and utilizations is available on pages 19-20 in the Full Disclosure Report.

EXECUTIVE SUMMARY Page 5 of 8

#### **Response Time - Throughput Curve**

The Response Time-Throughput Curve illustrates the Average Response Time (milliseconds) and I/O Request Throughput at 100%, 95%, 90%, 80%, 50%, and 10% of the workload level used to generate the SPC-1 IOPS $^{\text{TM}}$  metric.

The Average Response Time measured at the any of the above load points cannot exceed 30 milliseconds or the benchmark measurement is invalid.

#### **Response Time - Throughput Data**

|                             | 10% Load  | 50% Load   | 80% Load   | 90% Load   | 95% Load   | 100% Load  |
|-----------------------------|-----------|------------|------------|------------|------------|------------|
| I/O Request Throughput      | 38,047.59 | 190,253.20 | 304,422.35 | 342,453.46 | 361,491.51 | 380,489.30 |
| Average Response Time (ms): |           |            | l          |            |            |            |
| All ASUs                    | 2.20      | 2.96       | 4.36       | 5.20       | 6.50       | 7.64       |
| ASU-1                       | 2.84      | 3.67       | 5.14       | 5.94       | 7.25       | 8.37       |
| ASU-2                       | 1.99      | 2.83       | 4.26       | 5.05       | 6.34       | 7.45       |
| ASU-3                       | 0.95      | 1.50       | 2.73       | 3.68       | 4.99       | 6.16       |
| Reads                       | 4.19      | 5.30       | 7.04       | 7.80       | 9.22       | 10.36      |
| Writes                      | 0.91      | 1.44       | 2.62       | 3.50       | 4.74       | 5.86       |

Total Price 7,165,323.1

The above pricing includes hardware maintenance and software support for three years, 7 days per week, 24 hours per day. The hardware maintenance and software support provides the following:

- Acknowledgement of new and existing problems with four (4) hours.
- Onsite present of a qualified maintenance engineer or provision of a customer replaceable part within four (4) hours of the above acknowledgement for any hardware failure that results in an inoperative Price Storage Configuration that can be remedied by the repair or replacement of a Priced Storage Configuration component.

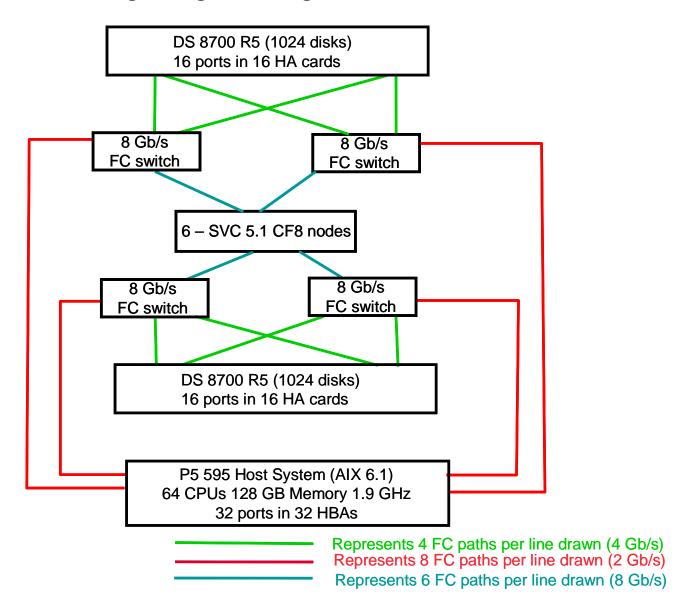

SPC Benchmark  $1^{\text{TM}}$  V1.12 Executive Summary Submission Identifier: A00087 IBM Corporation Submitted for Review: February 1, 2010 IBM System Storage SAN Volume Controller v5.1 (6-node cluster with 2 IBM DS8700s) Revised: March 9, 2010

EXECUTIVE SUMMARY Page 7 of 8

### Differences between the Tested Storage Configuration (TSC) and Priced Storage Configuration

There were no differences between the TSC and Priced Storage Configuration.

## Benchmark Configuration (BC)/Tested Storage Configuration (TSC)/Priced Storage Configuration Diagram

All storage was managed by each SVC node (single image). Each switch had 24 ports enabled, with one zone for node-to-storage traffic and one zone for node-to-host traffic
