## **Trademarks**

SPC Benchmark 1, SPC-1 IOPS, and SPC-1 LRT are trademarks of the Storage Performance Council. IBM and TotalStorage are registered trademarks of IBM Corporation in the United States and other countries. UNIX is a registered trademark of The Open Group in the United States and other countries. All other brands, trademarks, and product names are the property of their respective owners.

## **Notes**

The following terms, used in this document, are defined as:

- Kilobyte (KB) is equal to 1,000 ( $10^3$ ) bytes.
- Megabyte (MB) is equal to 1,000,000 ( $10^6$ ) bytes.
- Gigabyte (GB) is equal to 1,000,000,000 ( $10^9$ ) bytes.
- Terabyte (TB) is equal to 1,000,000,000,000 ( $10^{12}$ ) bytes.
- A petabyte (PB) is equal to 1,000,000,000,000,000 ( $10^{15}$ ) bytes.
- An exabyte (EB) is equal to 1,000,000,000,000,000,000 ( $10^{18}$ ) bytes.

## **AUDIT CERTIFICATION**

**Gradient**  
SYSTEMS

Bruce McNutt  
IBM Corporation  
KBV/9062-2  
9000 South Rita Road  
Tucson, AZ 85744

October 26, 2005

The SPC Benchmark 1™ results listed below for the IBM TotalStorage® DS8300 (Release 6.1.600) were produced in compliance with the SPC Benchmark 1™ V1.9 Remote Audit requirements.

<b>SPC Benchmark 1™ V1.9 Results</b>	
<b>Tested Storage Configuration (TSC) Name:</b>	
	IBM TotalStorage® DS8300 (Release 6.1.600)
Metric	<b>Reported Result</b>
SPC-1 IOPS™	101,101.68
SPC-1 Price-Performance	\$21.61/SPC-1 IOPS™
Total ASU Capacity	6,755.600 GB
Data Protection Level	Mirroring
Total TSC Price (including three-year maintenance)	\$2,185,472

The following SPC Benchmark 1™ Remote Audit requirements were reviewed and found compliant with V1.9 of the SPC Benchmark 1™ specification:

- A Letter of Good Faith, signed by a senior executive.
- The following Data Repository storage items were verified using information supplied by IBM Corporation:
  - ✓ Physical Storage Capacity and requirements.
  - ✓ Configured Storage Capacity and requirements.
  - ✓ Addressable Storage Capacity and requirements.
  - ✓ Capacity of each Logical Volume and requirements.
  - ✓ Capacity of each Application Storage Unit (ASU) and requirements.
- An appropriate diagram of the Benchmark Configuration (BC)/Tested Storage Configuration (TSC).

Storage Performance Council  
643 Bair Island Road, Suite 103  
Redwood City, CA 94062

## **AUDIT CERTIFICATION (CONT.)**

IBM TotalStorage® DS8300 (Release 6.1.600)  
SPC-1 Audit Certification

Page 2

- Listings and commands to configure the Benchmark Configuration/Tested Storage Configuration, including customer tunable parameters.
- Commands and parameters used to configure the SPC-1 Workload Generator.
- The following Host System requirements were reviewed using documentation supplied by IBM Corporation:
  - ✓ The type of Host System including the number of processors and main memory.
  - ✓ The presence and version number of the Workload Generator on the Host System.
  - ✓ The TSC boundary within the Host System.
- The Test Results Files and resultant Summary Results Files received from IBM Corporation for each of following were authentic, accurate, and compliant with all of the requirements and constraints of Clauses 4 and 5 of the SPC-1 Benchmark Specification:
  - ✓ Data Persistence Test
  - ✓ Sustainability Test Phase
  - ✓ IOPS Test Phase
  - ✓ Response Time Ramp Test Phase
  - ✓ Repeatability Test
- There were no differences between the Tested Storage Configuration (TSC) used for the benchmark and Priced Storage Configuration.
- The final version of the pricing spreadsheet met all of the requirements and constraints of Clause 8 of the SPC-1 Benchmark Specification.
- The Full Disclosure Report (FDR) met all of the requirements in Clause 9 of the SPC-1 Benchmark Specification.

Respectfully,

Walter E. Baker  
SPC Auditor

Storage Performance Council  
643 Bair Island Road, Suite 103  
Redwood City, CA 94062

**LETTER OF GOOD FAITH**

Vice President & BLE, Disk Storage  
IBM Technology & Systems Group  
5600 Cottle Road, San Jose, California 95193

Phone: 408-256-7406  
Fax: 408-256-7420

October 18, 2005

Mr. Walter E. Baker, SPC Auditor  
Gradient Systems, Inc.  
643 Bair Island Road, Suite 103  
Redwood City, CA 94063

Subject: SPC-1 Letter of Good Faith for the IBM TotalStorage DS8300

IBM Corporation is the SPC-1 Test Sponsor for the above listed product. To the best of our knowledge and belief, the required SPC-1 benchmark results and materials we have submitted for that product are complete, accurate, and in full compliance with Version 1.9 of the SPC-1 benchmark specification.

Our disclosure of the Benchmark configuration and execution of the benchmark includes all items that, to the best of our knowledge and belief, materially affect the reported results, regardless of whether such items are explicitly required to be disclosed by the SPC-1 benchmark specification.

Sincerely,

Barry Rudolph

### **Revision Information and Key Dates**

<b>Revision Information and Key Dates</b>	
<b>SPC-1 Specification revision number</b>	V1.9
<b>SPC-1 Workload Generator revision number</b>	V2.00.04a
<b>Date Results were first used publicly</b>	October 27, 2005
<b>Date the FDR was submitted to the SPC</b>	October 27, 2005
<b>Date the TSC is available for shipment to customers</b>	January 27, 2006
<b>Date the TSC completed audit certification</b>	October 26, 2005

## Summary of Results

SPC-1 Results	
Tested Storage Configuration (TSC) Name: IBM TotalStorage® DS8300 (Release 6.1.600)	
Metric	Reported Result
SPC-1 IOPS™	101,101.68
SPC-1 Price-Performance	\$21.61/SPC-1 IOPS™
Total ASU Capacity	6,755,600 GB
Data Protection Level	Mirroring
Total TSC Price (including three-year maintenance)	\$2,185,472

**SPC-1 IOPS™** represents the maximum I/O Request Throughput at the 100% load point.

**Total ASU (Application Storage Unit) Capacity** represents the total storage capacity read and written in the course of executing the SPC-1 benchmark.

A **Data Protection Level** of Mirroring configures two or more identical copies of user data.

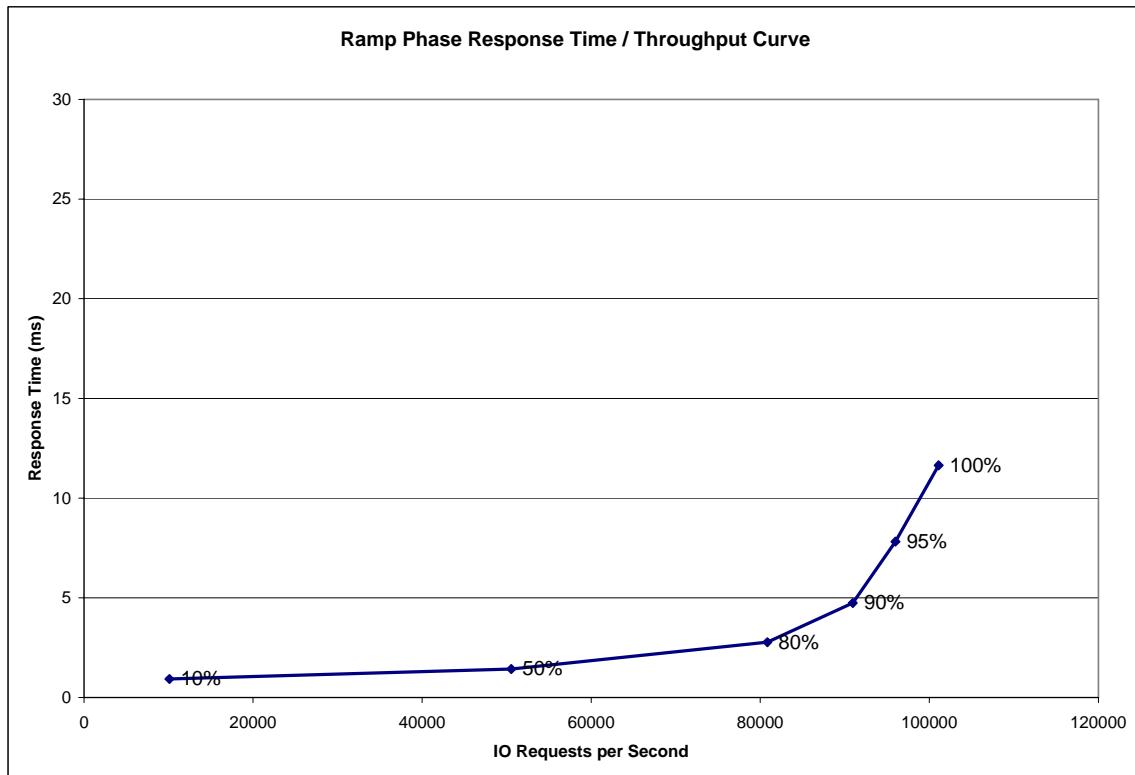

## Storage Capacities and Relationships

The following diagram documents the various storage capacities, used in this benchmark, and their relationships.

## Response Time – Throughput Curve

The Response Time-Throughput Curve illustrates the Average Response Time (milliseconds) and I/O Request Throughput at 100%, 95%, 90%, 80%, 50%, and 10% of the workload level used to generate the SPC-1 IOPS™ metric.

The Average Response Time measured at any of the above load points cannot exceed 30 milliseconds or the benchmark measurement is invalid.

## Response Time – Throughput Data

	10% Load	50% Load	80% Load	90% Load	95% Load	100% Load
I/O Request Throughput	10,104.16	50,552.23	80,836.03	90,940.32	95,998.25	101,101.68
Average Response Time (ms):						
All ASUs	0.93	1.43	2.77	4.74	7.82	11.64
ASU-1	1.07	1.55	2.81	4.67	7.67	11.40
ASU-2	1.34	1.91	3.35	5.27	8.34	11.82
ASU-3	0.46	0.95	2.45	4.65	7.90	12.08
Reads	1.75	2.53	4.21	6.22	9.34	12.98
Writes	0.40	0.71	1.84	3.77	6.83	10.78

## **Tested Storage Configuration Pricing (*Priced Storage Configuration*)**

<b>Product</b>	<b>Description</b>	<b>Quantity</b>	<b>Unit Price</b>	<b>Extended Purchase</b>
2107-922	TotalStorage DS8300	1	190,000.00	190,000.00
	1 9xE factory merge	2	N/C	N/C
221	922 - 92E Position 1	1	N/C	N/C
222	922 - 92E Position 2	1	N/C	N/C
700	OEL Indicator	1	N/C	N/C
815	25.1 to 50.0 TB capacity	1	N/C	N/C
900	Non-Standby CoD	1	N/C	N/C
1050	Battery Assembly	3	1,700.00	5,100.00
1090	Line Cord (US/LA/AP/Canada)	1	1,900.00	1,900.00

## Tested Storage Configuration Pricing (*Priced Storage Configuration*) – cont.

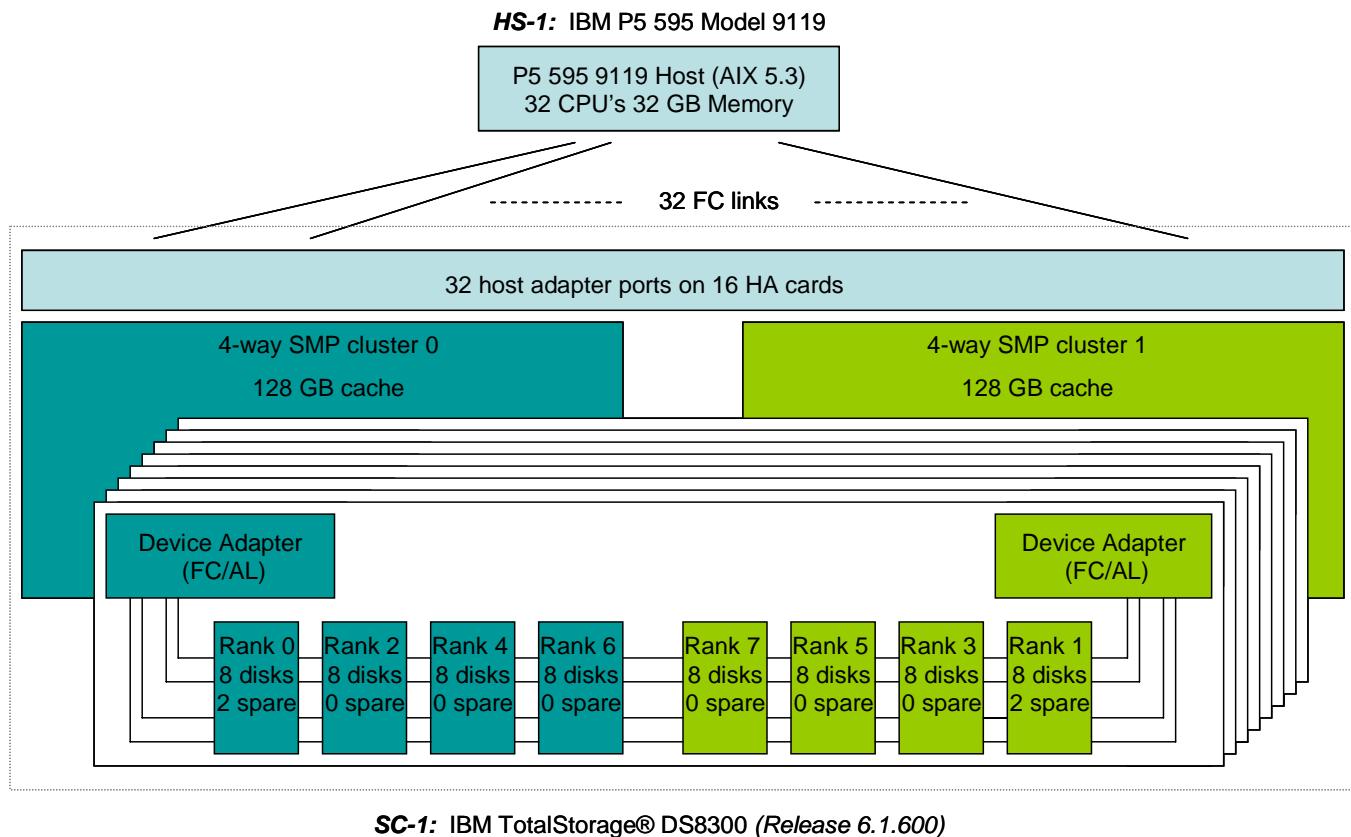

Product	Description	Quantity	Unit Price	Extended Purchase
2107-92E	TotalStorage DS8000 Enclosure Unit 1 9xE factory merge	1	75,000.00 N/C	75,000.00 N/C
221 922 - 92E	Position 1	1	N/C	N/C
1020	Power Module second pair	1	N/C	N/C
1050	Battery Assembly	3	1,700.00	5,100.00
1090	Line Cord (US/LA/AP/Canada)	1	1,900.00	1,900.00
1210	Disk Enclosure Pair	8	10,000.00	80,000.00
1212	Disk Drive Cable Group 2	1	1,900.00	1,900.00
1300	I/O Enclosure Pair	2	12,500.00	25,000.00
1314	RIO-G Cable Group 4	1	2,300.00	2,300.00
2016	73 GB 15K Drive Set	16	26,000.00	416,000.00
3011	Device Adapter Pair	4	10,000.00	40,000.00
9090	AC Voltage: 200V - 240V	1	N/C	N/C
Serial: N/A		<b>Total</b>		<b>647,200.00</b>
2244-OEL	DS8000 Function Authorization	1	N/C	N/C
7001	OEL - 1 TB Unit	3	6,750.00	20,250.00
7003	OEL - 10 TB Unit	1	54,500.00	54,500.00
7004	OEL - 25 TB Unit	1	87,500.00	87,500.00
Serial: N/A		<b>Total</b>		<b>162,250.00</b>
===== Non-S8300 charges =====				
5716 P5 595 adapter (2 Gbit, PCI-X)	32	2,720.00	87,040.00	
Short wave FC cable (2 Gbit, 25m)	32	210.00	6,720.00	
		<b>Total</b>		<b>93,760.00</b>
<b>Total DS8300 Charges</b>		<b>2,788,950.00</b>		
<b>Field Delegation Discount of 25%</b>		<b>697,237.50</b>		
<b>Total DS8300 Charges after discount</b>		<b>2,091,712.50</b>		
<b>Non-DS8300 Charges</b>		<b>93,760.00</b>		
<b>Total Charges</b>		<b>2,185,472.50</b>		

The above pricing provides maintenance/support for 24 hours per day, 7 days per week for three years with four hour acknowledgement and four hour subsequent response (support engineer onsite or customer replaceable part available).

## Differences between the Tested Storage Configuration (TSC) and Priced Storage Configuration

There were no differences between the Tested Storage Configuration and the Priced Storage Configuration.

## Benchmark Configuration/Tested Storage Configuration Diagram

Host Systems:	Tested Storage Configuration (TSC):
<b>UID=HS-1</b>	32 – P5 595 adapters (2Gb, PCI-X)
IBM P5 595 Model 9119	
32 – 1.9 GHz CPUs – 2 CPUs/POWER5 chip 32 KB L1 cache, 960 KB L2 cache, and 18 MB L3 cache per CPU	<b>UID=SC-1:</b> TotalStorage® DS8300 (Release 6.1.600) Each cluster contains: 4 POWER5 CPUs 128 GB processor memory/cluster
32 GB main memory	
AIX 5.3	
PCI-X/RIO	8 – 4-port 2Gb/s FC-AL device adapter pairs
WG	16 – 2Gb SW FCP/FICON adapters
	32 – Disk enclosure pairs 16 – 73 GB, 15K RPM disk drives per enclosure

## **CONFIGURATION INFORMATION**

### **Benchmark Configuration (BC)/Tested Storage Configuration (TSC) Diagram**

#### Clause 9.2.4.4.1

A one page Benchmark Configuration (BC)/Tested Storage Configuration (TSC) diagram shall be included in the Executive Summary...

The Benchmark Configuration (BC)/Tested Storage Configuration (TSC) is illustrated on page 14 (*Benchmark Configuration/Tested Storage Configuration Diagram*).

### **Storage Network Configuration**

#### Clause 9.2.4.4.1

...

5. If the TSC contains network storage, the diagram will include the network configuration. If a single diagram is not sufficient to illustrate both the Benchmark Configuration and network configuration in sufficient detail, the Benchmark Configuration diagram will include a high-level network illustration as shown in Figure 9-8. In that case, a separate, detailed network configuration diagram will also be included as described in Clause 9.2.4.4.2.

#### Clause 9.2.4.4.2

If a storage network was configured as a part of the Tested Storage Configuration and the Benchmark Configuration diagram described in Clause 9.2.4.4.1 contains a high-level illustration of the network configuration, the Executive Summary will contain a one page topology diagram of the storage network as illustrated in Figure 9-9.

The storage network configured as a part of the Tested Storage Configuration is illustrated on page 14 (*Benchmark Configuration/Tested Storage Configuration Diagram*).

## Host System Configuration

### Clause 9.2.4.4.3

*The FDR shall minimally contain, for each Host System running the Workload Generator, a listing of the following:*

1. Number and type of CPUs.
2. Main memory capacity.
3. Cache memory capacity.
4. Number and type of disk controllers or Host Bus Adapters.

The details of the Host System configuration may be found on page 14 (*Benchmark Configuration/Tested Storage Configuration Diagram*).

## Customer Tunable Parameters and Options

### Clause 9.2.4.5.1

*All Benchmark Configuration (BC) components with customer tunable parameter and options that have been altered from their default values must be listed in the FDR. The FDR entry for each of those components must include both the name of the component and the altered value of the parameter or option. If the parameter name is not self-explanatory to a knowledgeable practitioner, a brief description of the parameter's use must also be included in the FDR entry.*

“Appendix A: Customer Tunable Parameters and Options” on page 56 contains the customer tunable parameters and options that have been altered from their default values for this benchmark.

## Tested Storage Configuration (TSC) Description

### Clause 9.2.4.5.2

*The FDR must include sufficient information to recreate the logical representation of the TSC. In addition to customer tunable parameters and options (Clause 4.2.4.5.3), that information must include, at a minimum:*

- A diagram and/or description of the following:
  - All physical components that comprise the TSC. Those components are also illustrated in the BC Configuration Diagram in Clause 9.2.4.4.1 and/or the Storage Network Configuration Diagram in Clause 9.2.4.4.2.
  - The logical representation of the TSC, configured from the above components that will be presented to the Workload Generator.
- Listings of scripts used to create the logical representation of the TSC.
- If scripts were not used, a description of the process used with sufficient detail to recreate the logical representation of the TSC.

“Appendix B: Tested Storage Configuration (TSC) Creation” on page 57 contains the detailed information that describes how to create and configure the logical TSC.

## SPC-1 Workload Generator Storage Configuration

### Clause 9.2.4.5.3

*The FDR must include all SPC-1 Workload Generator storage configuration commands and parameters.*

The SPC-1 Workload Generator storage configuration commands and parameters for this measurement appear in “Appendix C: SPC-1 Workload Generator Storage Commands and Parameters” on page 67.

## **DATA REPOSITORY**

### **Definitions**

**Total ASU Capacity:** The total storage capacity read and written in the course of executing the SPC-1 benchmark.

**Application Storage Unit (ASU):** The logical interface between the storage and SPC-1 Workload Generator. The three ASUs (Data, User, and Log) are typically implemented on one or more Logical Volume.

**Logical Volume:** The division of Addressable Storage Capacity into individually addressable logical units of storage used in the SPC-1 benchmark. Each Logical Volume is implemented as a single, contiguous address space.

**Addressable Storage Capacity:** The total storage (sum of Logical Volumes) that can be read and written by application programs such as the SPC-1 Workload Generator.

**Configured Storage Capacity:** This capacity includes the Addressable Storage Capacity and any other storage (parity disks, hot spares, etc.) necessary to implement the Addressable Storage Capacity.

**Physical Storage Capacity:** The formatted capacity of all storage devices physically present in the Tested Storage Configuration (TSC).

**Data Protection Overhead:** The storage capacity required to implement the ECC data protection.

**Required Storage:** The amount of Configured Storage Capacity required to implement the Addressable Storage Configuration, excluding the storage required for the three ASUs.

**Global Storage Overhead:** The amount of Physical Storage Capacity that is required for storage subsystem use and unavailable for use by application programs.

**Total Unused Storage:** The amount of storage capacity available for use by application programs but not included in the Total ASU Capacity.

## Storage Capacities and Relationships

*Two tables and an illustration documenting the storage capacities and relationships of the SPC-1 Storage Hierarchy (Clause 2.1) shall be included in the FDR.*

### SPC-1 Storage Capacities

SPC-1 Storage Capacities		
Storage Hierarchy Component	Units	Capacity
Total ASU Capacity	Gigabytes (GB)	6,755.600
Addressable Storage Capacity	Gigabytes (GB)	6,957.847
Configured Storage Capacity	Gigabytes (GB)	32,985.349
Physical Storage Capacity	Gigabytes (GB)	37,584.829
Data Protection Overhead (mirror)	Gigabytes (GB)	16,492.674
Required Storage/Spares	Gigabytes (GB)	2,297.600
Global Storage Overhead	Gigabytes (GB)	2,301.880
Total Unused Storage	Gigabytes (GB)	9,879.192

### SPC-1 Storage Hierarchy Ratios

	Addressable Storage Capacity	Configured Storage Capacity	Physical Storage Capacity
<b>Total ASU Capacity</b>	97.09%	20.48%	17.97%
<b>Required for Data Protection (Mirroring)</b>		50.00%	43.88%
<b>Addressable Storage Capacity</b>		21.09%	18.51%
<b>Required Storage</b>		6.97%	6.11%
<b>Configured Storage Capacity</b>			87.76%
<b>Global Storage Overhead</b>			6.12%
<b>Unused Storage:</b>			
<b>Addressable</b>	2.91%		
<b>Configured</b>		28.72%	
<b>Physical</b>			0.00%

The Physical Storage Capacity consisted of 37,584.829 GB distributed over 512 disk drives each with a formatted capacity of 73.408 GB. There was 0.000 GB (0.00%) of Unused Storage within the Physical Storage Capacity. Global Storage Overhead consisted of 2,301.880 GB (6.12%) of Physical Storage Capacity. There was 9,474.698 GB (28.72%) of Unused Storage within the Configured Storage Capacity. The Total ASU Capacity utilized 97.09% of the Addressable Storage Capacity resulting in 202.247 GB (2.91%) of Unused Storage within the Addressable Storage Capacity.

## SPC-1 Storage Capacities and Relationships Illustration

The various storage capacities configured in the benchmark result are illustrated below (not to scale).

## Logical Volume Capacity and ASU Mapping

### Clause 9.2.4.6.2

A table illustrating the capacity of each ASU and the mapping of Logical Volumes to ASUs shall be provided in the FDR. ... Logical Volumes shall be sequenced in the table from top to bottom per its position in the contiguous address space of each ASU. The capacity of each Logical Volume shall be stated. ... In conjunction with this table, the Test Sponsor shall provide a complete description of the type of data protection (see Clause 2.4.5) used on each Logical Volume.

Logical Volume Capacity and Mapping		
ASU-1 (3,040.000 GB)	ASU-2 (3,040.000 GB)	ASU-3 (675.600 GB)
8 Logical Volumes 386.547 GB per Logical Volume (380.000 GB used per Logical Volume)	8 Logical Volumes 386.547 GB per Logical Volume (380.000 GB used per Logical Volume)	2 Logical Volumes 386.547 GB per Logical Volume (337.800 GB used per Logical Volume)

The Data Protection Level used for all Logical Volumes was Mirroring as described on page 10. See “ASU Configuration” in the [IOPS Test Results File](#) for more detailed configuration information.

## **SPC-1 BENCHMARK EXECUTION RESULTS**

### **Definitions**

**Average Response Time:** The sum of the Response Times for all Measured I/O Requests divided by the total number of Measured I/O Requests.

**I/O Request Throughput:** The total number of Measured I/O requests in an SPC-1 Test Run divided by the duration of the Measurement Interval in seconds.

**Measurement Interval:** The finite and contiguous time period, after the Tested Storage Configuration (TSC) has reached Steady State, when data is collected by a Test Sponsor to generate an SPC-1 test result or support an SPC-1 test result.

**Steady State:** The consistent and sustainable throughput of the TSC. During this period the load presented to the TSC by the Workload Generator is constant. Comment: Steady State is achieved only after caches in the TSC have filled and as a result the I/O Request throughput of the TSC has stabilized.

**Test:** A collection of Test Phases or Test Runs sharing a common objective.

**Test Phase:** A collection of one or more SPC-1 Test Runs sharing a common objective and intended to be run in a specific sequence.

**Test Run:** The execution of SPC-1 for the purpose of producing or supporting an SPC-1 test result. SPC-1 Test Runs may have a finite and measured Ramp-Up period, Start-Up period, Shut-Down period, and Ramp-Down period as illustrated in the Figure 5-1 below. All SPC-1 Test Runs shall have a Steady State period and a Measurement Interval.

The SPC-1 benchmark consists of the following Tests, Test Phases, and Test Runs:

- **Data Persistence Test**
  - Data Persistence Test Run 1
  - Data Persistence Test Run 2
- **Primary Metrics Test**
  - Sustainability Test Phase and Test Run
  - IOPS Test Phase and Test Run
  - Response Time Ramp Test Phase
    - 95% of IOPS Test Run
    - 90% of IOPS Test Run
    - 80% of IOPS Test Run
    - 50% of IOPS Test Run
    - 10% of IOPS Test Run (LRT)
- **Repeatability Test**
  - Repeatability Test Phase 1
    - 10% of IOPS Test Run (LRT)
    - IOPS Test Run
  - Repeatability Test Phase 2
    - 10% of IOPS Test Run (LRT)
    - IOPS Test Run

Each Test is an atomic unit that must be executed from start to finish before any other Test, Test Phase, or Test Run may be executed.

The results from each Test, Test Phase, and Test Run are listed below along with a more detailed explanation of each component.

## Primary Metrics Test – Sustainability Test Phase

### Clause 5.4.2.1

*The Sustainability Test Phase consists of one Test Run at the 100% load point with a Measurement Interval of three (3) hours. The intent is to demonstrate a sustained maximum I/O Request Throughput as well as insuring the Tested Storage Configuration (TSC) has reached steady state prior to measuring the maximum I/O Request Throughput (SPC-1™ IOPS).*

*The reported I/O Request Throughput of the Sustainability Test Run must be within 5% of the reported SPC-1™ IOPS primary metric. The Average Response Time measured in Sustainability Test Run cannot exceed thirty (30) milliseconds.*

### Clause 9.2.4.7.1

*For the Sustainability Test Phase the FDR shall contain:*

1. *A Data Rate Distribution graph and data table.*
2. *I/O Request Throughput Distribution graph and data table.*
3. *A Response Time Frequency Distribution graph and table.*
4. *An Average Response Time Distribution graph and table.*
5. *The human readable Test Run Results File produced by the Workload Generator (may be included in an appendix).*
6. *A listing or screen image of all input parameters supplied to the Workload Generator (may be included in an appendix).*
7. *The Measured Intensity Multiplier for each I/O stream.*
8. *The variability of the Measured Intensity Multiplier, as defined in Clause 5.3.13.3.*

## SPC-1 Workload Generator Input Parameters

The SPC-1 Workload Generator input parameters for the Sustainability, IOPS, Response Time Ramp, Repeatability, and Persistence Test Runs are documented in “Appendix D: SPC-1 Workload Generator Input Parameters” on Page 68.

## Sustainability Test Results File

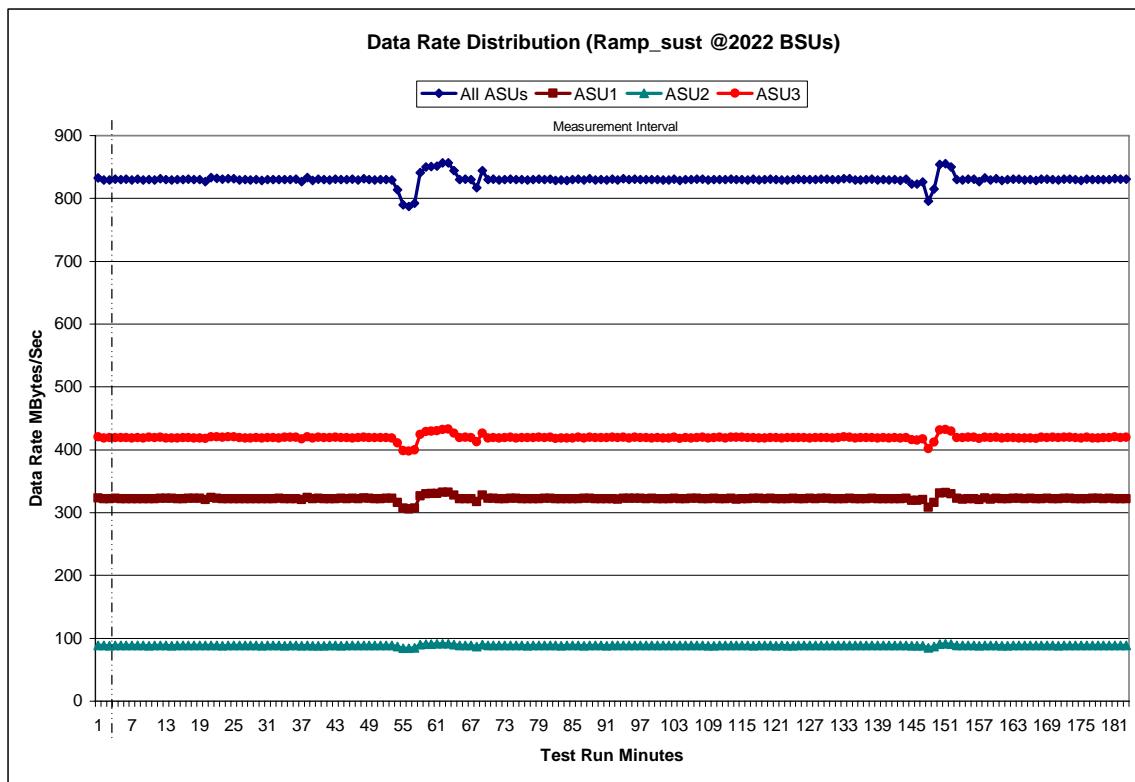

A link to the test results file generated from the Sustainability Test Run is listed below.

### Sustainability – Response Time Frequency Distribution Graph

### Sustainability – Measured Intensity Multiplier and Coefficient of Variation

	ASU1-1	ASU1-2	ASU1-3	ASU1-4	ASU2-1	ASU2-2	ASU2-3	ASU3-1
IM	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
MIM	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
COV	0.002	0.001	0.001	0.001	0.003	0.001	0.002	0.001

#### Clause 3.4.3

**IM – Intensity Multiplier:** The ratio of I/Os for each I/O stream relative to the total I/Os for all I/O streams (ASU1-1 – ASU3-1) as required by the benchmark specification.

#### Clauses 5.1.0 and 5.3.13.2

**MIM – Measured Intensity Multiplier:** The Measured Intensity Multiplier represents the ratio of measured I/Os for each I/O stream relative to the total I/Os measured for all I/O streams (ASU1-1 – ASU3-1). This value may differ from the corresponding Expected Intensity Multiplier by no more than 5%.

#### Clause 5.3.13.3

**COV – Coefficient of Variation:** This measure of variation for the Measured Intensity Multiplier cannot exceed 0.2.

## Primary Metrics Test – IOPS Test Phase

### Clause 5.4.2.2

The IOPS Test Phase consists of one Test Run at the 100% load point with a Measurement Interval of ten (10) minutes. The IOPS Test Phase immediately follows the Sustainability Test Phase without any interruption or manual intervention.

The IOPS Test Run generates the SPC-1 IOPS™ primary metric, which is computed as the I/O Request Throughput for the Measurement Interval of the IOPS Test Run.

The Average Response Time is computed for the IOPS Test Run and cannot exceed 30 milliseconds. If the Average Response Time exceeds the 30 millisecond constraint, the measurement is invalid.

### Clause 9.2.4.7.2

For the IOPS Test Phase the FDR shall contain:

1. I/O Request Throughput Distribution (data and graph).
2. A Response Time Frequency Distribution.
3. An Average Response Time Distribution.
4. The human readable Test Run Results File produced by the Workload Generator.
5. A listing or screen image of all input parameters supplied to the Workload Generator.
6. The total number of I/O Requests completed in the Measurement Interval as well as the number of I/O Requests with a Response Time less than or equal to 30 milliseconds and the number of I/O Requests with a Response Time greater than 30 milliseconds.

## SPC-1 Workload Generator Input Parameters

The SPC-1 Workload Generator input parameters for the Sustainability, IOPS, Response Time Ramp, Repeatability, and Persistence Test Runs are documented in “Appendix D: SPC-1 Workload Generator Input Parameters” on Page 68.

## IOPS Test Results File

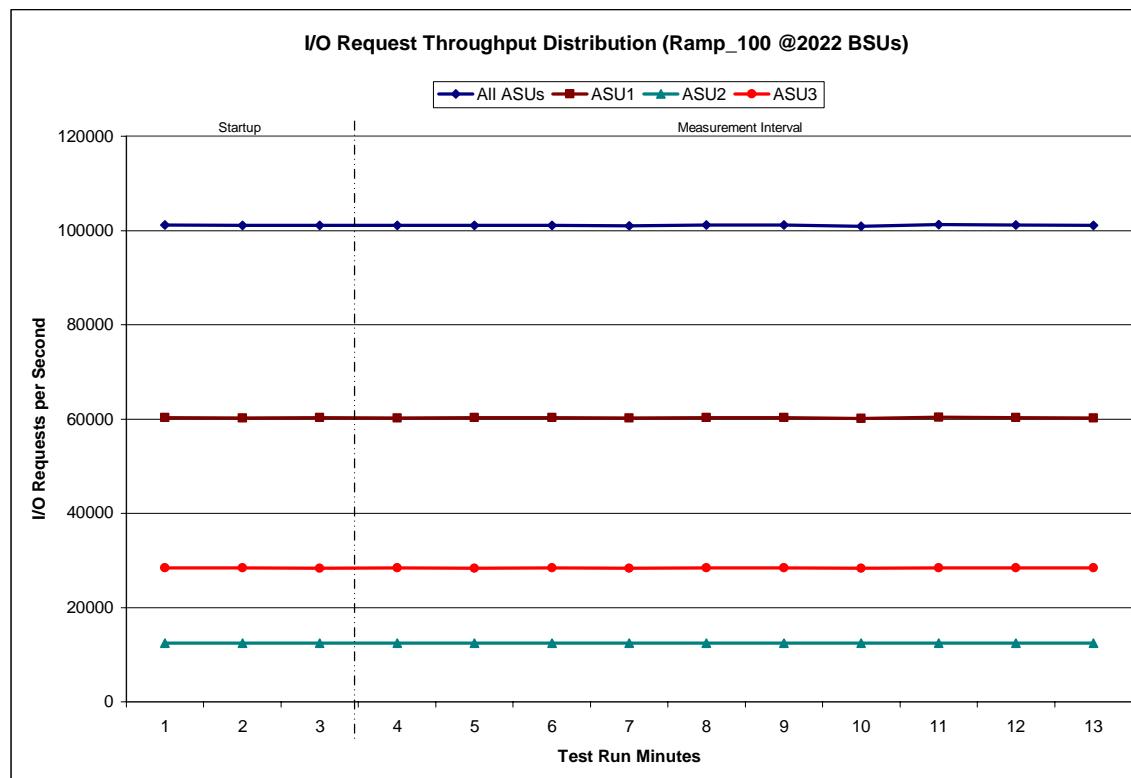

A link to the test results file generated from the IOPS Test Run is listed below.

COV	0.002	0.000	0.001	0.001	0.003	0.001	0.002	0.001

Clause 3.4.3

**IM – Intensity Multiplier:** The ratio of I/Os for each I/O stream relative to the total I/Os for all I/O streams (ASU1-1 – ASU3-1) as required by the benchmark specification.

Clauses 5.1.0 and 5.3.13.2

**MIM – Measured Intensity Multiplier:** The Measured Intensity Multiplier represents the ratio of measured I/Os for each I/O stream relative to the total I/Os measured for all I/O streams (ASU1-1 – ASU3-1). This value may differ from the corresponding Expected Intensity Multiplier by no more than 5%.

Clause 5.3.13.3

**COV – Coefficient of Variation:** This measure of variation for the Measured Intensity Multiplier cannot exceed 0.2.

## Primary Metrics Test – Response Time Ramp Test Phase

### Clause 5.4.2.3

The Response Time Ramp Test Phase consists of five Test Runs, one each at 95%, 90%, 80%, 50%, and 10% of the load point (100%) used to generate the SPC-1 IOPS™ primary metric. Each of the five Test Runs has a Measurement Interval of ten (10) minutes. The Response Time Ramp Test Phase immediately follows the IOPS Test Phase without any interruption or manual intervention.

The five Response Time Ramp Test Runs, in conjunction with the IOPS Test Run (100%), demonstrate the relationship between Average Response Time and I/O Request Throughput for the Tested Storage Configuration (TSC) as illustrated in the response time/throughput curve on page 11.

In addition, the Average Response Time measured during the 10% Test Run is the value for the SPC-1 LRT™ metric. That value represents the Average Response Time of a lightly loaded TSC.

### Clause 9.2.4.7.3

The following content shall appear in the FDR for the Response Time Ramp Phase:

1. A Response Time Ramp Distribution.
2. The human readable Test Run Results File produced by the Workload Generator for each Test Run within the Response Time Ramp Test Phase.
3. For the 10% Load Level Test Run (SPC-1 LRT™ metric) an Average Response Time Distribution.
4. A listing or screen image of all input parameters supplied to the Workload Generator.

## SPC-1 Workload Generator Input Parameters

The SPC-1 Workload Generator input parameters for the Sustainability, IOPS, Response Time Ramp, Repeatability, and Persistence Test Runs are documented in “Appendix D: SPC-1 Workload Generator Input Parameters” on Page 68.

## Response Time Ramp Test Results File

A link to each test result file generated from each Response Time Ramp Test Run listed below.

## Response Time Ramp Distribution (IOPS) Data

The five Test Runs that comprise the Response Time Ramp Phase are executed at 95%, 90%, 80%, 50%, and 10% of the Business Scaling Unit (BSU) load level used to produce the SPC-1 IOPS™ primary metric. The 100% BSU load level is included in the following Response Time Ramp data tables and graphs for completeness.

100% Load Level - 2022 BSUs				95% Load Level - 1920 BSUs				Start-Up/Ramp-Up Measurement Interval

MIM	0.0351	0.2808	0.0699	0.2099	0.0180	0.0700	0.0349	0.2814
COV	0.008	0.001	0.006	0.002	0.010	0.005	0.010	0.003

Clause 3.4.3

**IM – Intensity Multiplier:** The ratio of I/Os for each I/O stream relative to the total I/Os for all I/O streams (ASU1-1 – ASU3-1) as required by the benchmark specification.

Clauses 5.1.0 and 5.3.13.2

**MIM – Measured Intensity Multiplier:** The Measured Intensity Multiplier represents the ratio of measured I/Os for each I/O stream relative to the total I/Os measured for all I/O streams (ASU1-1 – ASU3-1). This value may differ from the corresponding Expected Intensity Multiplier by no more than 5%.

Clause 5.3.13.3

**COV – Coefficient of Variation:** This measure of variation for the Measured Intensity Multiplier cannot exceed 0.2.

## Repeatability Test

### Clause 5.4.5

The Repeatability Test demonstrates the repeatability and reproducibility of the SPC-1 IOPS™ primary metric and SPC-1 LRT™ metric generated in earlier Test Runs.

There are two identical Repeatability Test Phases. Each Test Phase contains two Test Runs. Each of the Test Runs will have a Measurement Interval of no less than ten (10) minutes. The two Test Runs in each Test Phase will be executed without interruption or any type of manual intervention.

The first Test Run in each Test Phase is executed at the 10% load point. The Average Response Time from each of the Test Runs is compared to the SPC-1 LRT™ metric. Each Average Response Time value must be less than the SPC-1 LRT™ metric plus 5%.

The second Test Run in each Test Phase is executed at the 100% load point. The I/O Request Throughput from the Test Runs is compared to the SPC-1 IOPS™ primary metric. Each I/O Request Throughput value must be greater than the SPC-1 IOPS™ primary metric minus 5%. In addition, the Average Response Time for each Test Run cannot exceed 30 milliseconds.

If any of the above constraints are not met, the benchmark measurement is invalid.

### Clause 9.2.4.7.4

The following content shall appear in the FDR for each Test Run in the two Repeatability Test Phases:

1. A table containing the results of the Repeatability Test.
2. An I/O Request Throughput Distribution graph and table.
3. An Average Response Time Distribution graph and table.
4. The human readable Test Run Results File produced by the Workload Generator.
5. A listing or screen image of all input parameters supplied to the Workload Generator.

## SPC-1 Workload Generator Input Parameters

The SPC-1 Workload Generator input parameters for the Sustainability, IOPS, Response Time Ramp, Repeatability, and Persistence Test Runs are documented in “Appendix D: SPC-1 Workload Generator Input Parameters” on Page 68.

## Repeatability Test Results File

The values for the SPC-1 IOPS™, SPC-1 LRT™, and the Repeatability Test measurements are listed below.

	SPC-1 IOPS™	SPC-1 LRT™
<i>Primary Metrics</i>	101,101.68	0.93
Repeatability Test Phase 1	101,122.40	0.91
Repeatability Test Phase 2	101,102.75	0.94

A link to the test result file generated from each Repeatability Test Run list is listed below.

[Repeatability Test Phase 1, Test Run 1 \(LRT\)](#)

[Repeatability Test Phase 1, Test Run 2 \(IOPS\)](#)

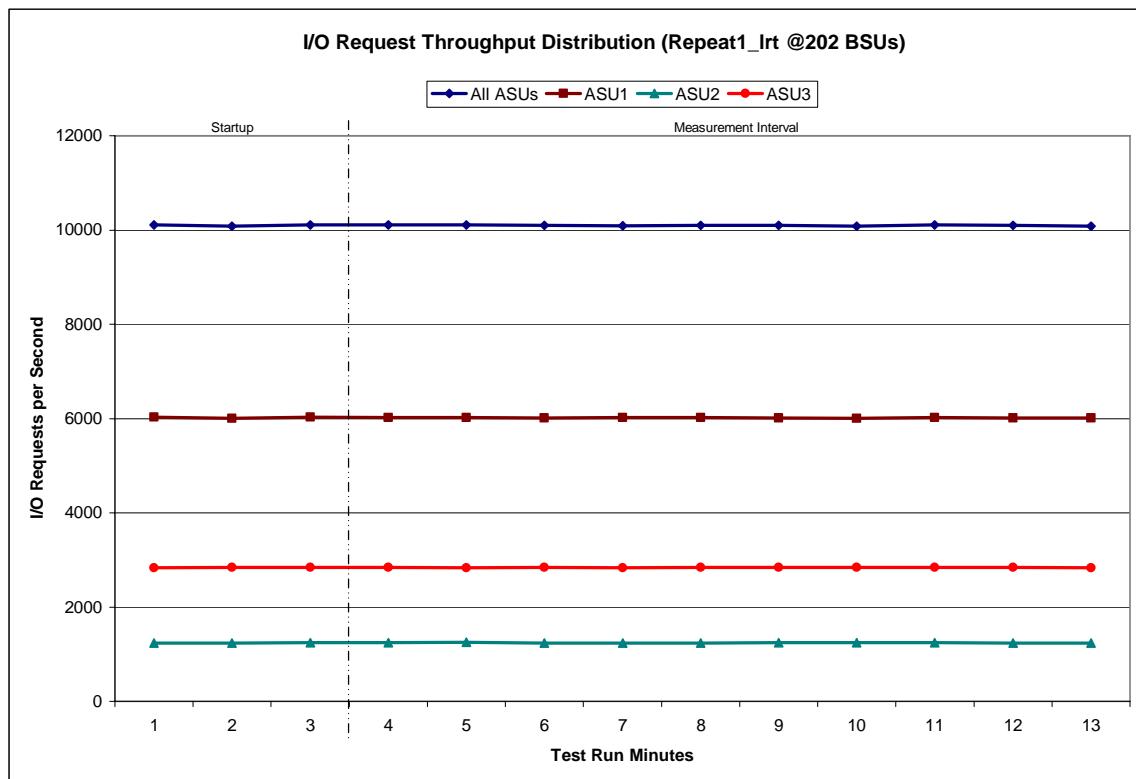

[Repeatability Test Phase 2, Test Run 1 \(LRT\)](#)

[Repeatability Test Phase 2, Test Run 2 \(IOPS\)](#)

## Data Persistence Test

### Clause 6

The Data Persistence Test demonstrates the Tested Storage Configuration (TSC):

- Is capable of maintaining data integrity across a power cycle.
- Ensures the transfer of data between Logical Volumes and host systems occurs without corruption or loss.

The SPC-1 Workload Generator will write 16 block I/O requests at random over the total Addressable Storage Capacity of the TSC for ten (10) minutes at a minimum of 25% of the load used to generate the SPC-1 IOP™ primary metric. The bit pattern selected to be written to each block as well as the address of the block will be retained in a log file.

The Benchmark Configuration will be shutdown and restarted using a power off/power on cycle at the end of the above sequence of write operations. In addition, any caches employing battery backup must be flushed/emptied.

The SPC-1 Workload Generator will then use the above log file to verify each block written contains the correct bit pattern.

### Clause 9.2.4.8

The following content shall appear in this section of the FDR:

1. A listing or screen image of all input parameters supplied to the Workload Generator.
2. For the successful Data Persistence Test Run, a table illustrating key results. The content, appearance, and format of this table are specified in Table 9-12. Information displayed in this table shall be obtained from the Test Run Results File referenced below in #3.
3. For the successful Data Persistence Test Run, the human readable Test Run Results File produced by the Workload Generator.

## SPC-1 Workload Generator Input Parameters

The SPC-1 Workload Generator input parameters for the Sustainability, IOPS, Response Time Ramp, Repeatability, and Persistence Test Runs are documented in “Appendix D: SPC-1 Workload Generator Input Parameters” on Page 68.

## Data Persistence Test Results File

A link to each test result file generated from each Data Persistence Test is listed below.

[Persistence 1 Test Results File](#)

[Persistence 2 Test Results File](#)

## Data Persistence Test Results

Data Persistence Test Results	
Data Persistence Test Run Number: 1	
Total Number of Logical Blocks Written	226,542,208
Total Number of Logical Blocks Verified	145,930,816
Total Number of Logical Blocks that Failed Verification	0
Time Duration for Writing Test Logical Blocks	10 minutes
Size in Bytes of each Logical Block	512
Number of Failed I/O Requests in the process of the Test	0

In some cases the same address was the target of multiple writes, which resulted in more Logical Blocks Written than Logical Blocks Verified. In the case of multiple writes to the same address, the pattern written and verified must be associated with the last write to that address.

## **PRICED STORAGE CONFIGURATION AVAILABILITY DATE**

### *Clause 9.2.4.9*

*The committed delivery date for general availability (Availability Date) of all products that comprise the Priced Storage Configuration must be reported. When the Priced Storage Configuration includes products or components with different availability dates, the reported Availability Date must be the date at which all components are committed to be available.*

*The FDR shall state: "The Priced Storage Configuration, as documented in this Full Disclosure Report will be available for shipment to customers on MMMM DD, YYYY." Where Priced Storage Configuration is the TSC Configuration Name as described in Clause 9.2.4.3.3 and MMMM is the alphanumeric month, DD is the numeric day, and YYYY is the numeric year of the date that the Priced Storage Configuration, as documented, is available for shipment to customers as described above.*

The IBM TotalStorage® DS8300 (Release 6.1.600), as documented in this Full Disclosure Report will become available for customer purchase and shipment on January 27, 2006.

## **PRICING INFORMATION**

### *Clause 9.2.4.11*

*A statement of the respective calculations for pricing must be included.*

### *Clause 9.2.4.11.3*

*A list of all differences between the Tested Storage Configuration (TSC) and Priced Storage Configuration must be included.*

Pricing information may found in the Tested Storage Configuration Pricing section on page 12. A list of all differences between the Tested Storage Configuration (TSC) and Priced Storage Configuration may be found in the Executive Summary portion of this document on page 12.

## **ANOMALIES OR IRREGULARITIES**

### *Clause 9.2.4.10*

*The FDR shall include a clear and complete description of any anomalies or irregularities encountered in the course of executing the SPC-1 benchmark that may in any way call into question the accuracy, verifiability, or authenticity of information published in this FDR.*

There were no anomalies or irregularities encountered during the SPC-1 Remote Audit of the IBM TotalStorage® DS8300 (Release 6.1.600).

**APPENDIX A: CUSTOMER TUNABLE PARAMETERS AND OPTIONS**

No customer tunable parameters or options were changed from their default values.

## **APPENDIX B: TESTED STORAGE CONFIGURATION (TSC) CREATION**

### **Create the RAID-10 ranks**

The first script, `step1_mkarray.txt`, groups the physical volumes into 64 RAID-10 arrays and the system automatically generates a set of array names, A0-A63. The next script, `step2_mkranks.txt`, defines the arrays, A0-A63, as 64 open system ranks, R0-R63. As in the previous script, the rank names are assigned by the system. The third script, `step3_rankpool.txt`, defines the ranks, R0-R63 to comprise a set of 64 “extent pools” (pools of available storage) with the names P0-P63.

## Create the LUNs

The **step4\_makevols.txt** script defines the 112 LUNs on the set of 64 RAID-10 ranks. The name of a rank identifies the DA to which the rank belongs and also assigns the rank a number, as illustrated by the Benchmark Configuration/Tested Storage Configuration Diagram on page 14. In ranks number 0 or 1, which contains spares, a single LUN of 128 GiB is defined. For all other ranks two LUNs of 128 GiB each are defined. After defining the LUNs, the script assigns each LUN to one of eight volume groups, V1-V8, so that paths can be assigned by groups of volumes.

## Define the LUN access paths

The next step is to define the paths by which each LUN can be accessed by the Host System. The path definitions are created by the `step5_define_paths.txt` script. Each host WWPN is assigned to one of the eight volume groups, V1-V8, so that each LUN is access via a set of four paths.

### step5\_define\_paths.txt

```
# Make SCSI host ports and assign a volume group to them.

#
#Configure Host Adapters for RIO Ports H1 through H4
for i in 1 25 9 17; do cfgmgr -vl fcs$i|grep Comp; done
```

## Create logical volume group and logical volumes

A logical volume group is created using the native AIX Logical Volume Manager. It is a striped volume group with a pattern of striping designed so that the amount of space utilized in each rank is proportional to the number of disk in that rank. The pattern of striping is accomplished with the `step7a_mkall.ksh` script, which calls `mkmap.ksh` as a subroutine. Once the striping pattern is defined, the `step7b_mkvg_spc1.ksh` script creates the 18 logical volumes that comprise the SPC-1 ASUs.

### step7a\_mkall.ksh

```
#!/bin/ksh

LVS=18
i=1
while (( i <= LVS ))
do
    mkmap.ksh $i 9 > map$i
    maps="$maps map$i"
    (( i=i+1 ))
done

paste -d " " $maps | more
```

### mkmap.ksh

```
#!/bin/ksh
#
# Creates mklv map files for creating spc1 LV config
#
if [ $# -ne 2 ]
then
    echo "usage: $0 <starting PP> <stripes>"
    exit 1

## **APPENDIX D: SPC-1 WORKLOAD GENERATOR INPUT PARAMETERS**

The following script was used to execute the required SPC-1 Test Runs with the exception of the Persistence Test Run 2, which was executed manually at the console. The contents of the `javaopts.cfg` are also listed below.

```
export PATH=$PATH:/usr/java14/bin
export SPC1HOME=/perform/spc1install
export CLASSPATH=$SPC1HOME
export LIBPATH=$SPC1HOME/aix
export IBM_JAVADUMP_OUTOFMEMORY=false
export IBM_HEAPDUMP_OUTOFMEMORY=false
java -Xoptionsfile=javaopts.cfg metrics -b 2022
java -Xoptionsfile=javaopts.cfg repeat1 -b 2022
java -Xoptionsfile=javaopts.cfg repeat2 -b 2022
java -Xoptionsfile=javaoptsp.cfg persist1 -b 2022
```

### **`javaopts.cfg:`**

```
-Xms384m -Xmx768m -Xss128k -Xgcpolicy:subpool
```
